

With the launch of our Nova line of helmets we introduced our most innovative feature to date: The Comfort Blend Plus liner. The Comfort Blend Plus liner is full of amazing details: a super-soft moisture-wicking knit material to help keep you comfortable and the TrackPat fabric pattern, that helps break up the hard edge that most helmets can create in your peripheral vision. But the feature that sets

it ahead of the competition is the Modular Fit Pad system which allows you to customize the fit of you G-FORCE Racing Gear helmet to fit you like no other helmet can. Due to overwhelming demand, the Comfort Blend Plus Liner is now available on all of our Snell SA2020, FIA8859 and SFI24.1 helmets (excluding the GF1 Open Faced helmet).

Each G-FORCE Racing Gear helmet comes standard with several specially designed sizing pads that can be used in 6 different liner Fit Pads in your helmet (4 around the crown of your head and each cheekpad). These sizing pads can be added (one at a time or in a stack) or removed all together to give you the greatest range of customization possible. Need more padding on the sides of your head, add some. Cheeks too tight? Go to a smaller size pad or run without one. It's completely up to you.

Please follow the directions below to start customizing your G-FORCE Racing Gear helmet and head over to gforce.com for more indepth videos and details.

A helpful tip: only remove one Modular Fit Pad at a time. This will help ensure that you will be able to get the pad back in the proper alignment when you're done.

1. Comfort Blend Plus liner with the stock fit pad based on the size of helmet ordered. Notice that there are 4 separate comfort liners around the crown of the head.

2. Pick the liner piece that you want to customize. Gently pull down on the top of the liner and find where it attaches to the impact liner with hook-and-loop. Pull along the hook-and-loop connection to remove the liner pad.

3. Remove the pad from the helmet

4. This is the location of the certification sticker (SA2020, FIA8859 or SFI24.1) for all G-FORCE Racing Gear helmets. (Right side of the head under the comfort liner.) Be careful: Any attempt to remove this sticker will cause the anti-tampering features to activate and void the certification. If that happens, there's no replacing it.

5. This is the back of the individual fit pad. The black hook-and-loop strip will keep the sizing pad in place.

6. Unhook one side of the black hook-and-loop piece and remove the stock foam sizing pad.

7. Find the size pad that you want to use. Here, we are changing the helmet from a 2mm pad to a thicker 4mm pad. Making this fit pad thicker and tighter on the head. You can go with one, none or all of the provided sizing pads to find your perfect fit!

8. Slide the chosen sizing pad back into the fit pad and gently push the black hook-and-loop piece to close it.

9. Line the fit pad back in place against the hook-and-loop and gently press the pad back in place.

10. One fit pad down and up to 5 more to adjust. 4 total around helmet and each of the cheekpads. The Comfort Blend Plus liner makes your G-FORCE Racing Gear helmet fit like it was made just for you.
